## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Chad J. Billings (Reg. No. 48,917) on 5/19/2008.

2. The claims have been amended as follows:

**In claim 1:**

On **page 4** (of the "Amendments to the Claims, dated April 24, 2008), **lines 23 - 25**, change

"a frame data correction device that outputs corrected object frame data based on inputted object frame data, said change quantity and said previous frame reproduction image data."

to --- a frame data correction device that outputs corrected object frame data based on said inputted object frame data, said change quantity and said previous frame reproduction image data.---;

**In claim 7:**

On **page 6** (of the "Amendments to the Claims, dated April 24, 2008), **lines 1 - 3**,  
change

"The image correction device according to claim 1, further comprising a recording  
device **means** for recording the inputted object frame data included in the  
inputted image signal."

to --- The image correction device according to claim 1, further comprising a  
recording device **[[means]]** for recording the inputted object frame data included  
in the inputted image signal. ---;

**In claim 13:**

On **page 7** (of the "Amendments to the Claims, dated April 24, 2008), **lines 3 - 4**,  
change

"The image correcting method according to claim 12, wherein said change  
quantity between the decoded object frame data and the decoded previous frame  
data **one frame previous to said object frame data** is outputted, and the  
correction image data is corrected on a basis of said change quantity."

to --- The image correcting method according to claim 12, wherein said change quantity between the decoded object frame data and the decoded previous frame data **[[one frame previous to said object frame data]]** is outputted, and the correction image data is corrected on a basis of said change quantity. ---;

3. The specification has been amended as follows:

On **page 2** (of the "Amendments to the Claims, dated April 24, 2008), **last line**, change

"signal w outputted from the **subtractor** 20 when data corresponding to 1/2"

to --- signal w outputted from the **[[subtractor]] adder** 20 when data corresponding to 1/2 ---;

On **page 3** (of the "Amendments to the Claims, dated April 24, 2008), **2<sup>nd</sup> to last line**, change

"**subtractor** 20 by subtracting 1/2 gray level data from the foregoing"

to --- **[[subtractor]] adder** 20 by subtracting 1/2 gray level data from the foregoing ---;

Art Unit: 2625

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

***Allowable Subject Matter***

4. Claims 1, 2, 4 - 7, and 12 - 17 are allowed. The following is an examiner's statement of reasons for allowance.

Independent claims 1 and 12 are respectively directed to *an image correction device*, and *an image correcting method*.

As noted in the previous action, **ISHII [US Patent Application 2004/0012551 A1]** *does not specifically teach* the following limitations from claim 1 (and similar limitations from corresponding claim 12):

*a first decoder connected to said encoder and decoding said encoded object frame data to produce decoded object frame data;*

*a change quantity calculating device that receives said decoded object frame data from said first decoder and said decoded previous frame data from said second decoder,*

and outputs a change quantity derived from subtracting said decoded object frame data from said decoded previous frame data;

a previous frame image reproducer that receives said change quantity and said inputted object frame data and adds said change quantity to said inputted object frame data producing previous frame reproduction image data;

It is interesting to note that if the encoder compressed *inputted object frame data* in a lossless or reversible manner, it would have been obvious to one of ordinary skill in the art at the time the invention was made to not include the above cited limitations of:

a first decoder,

outputting a change quantity derived from a difference between the outputs of first and second decoders,

a previous frame image reproducer

since the *second decoder* would produce an “exact copy” of the previous frame image data.

However, prior art, including ISHII's, does not teach nor renders obvious the uniquely distinct features cited above.

### ***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
